Des-Case Corporation Welcomes New Staff Members

WHITE HOUSE, Tenn. —Des-Case Corporation, a leading manufacturer of contamination control products, is pleased to announce the addition of two staff members to the team. These include Bob Huff and Brian Swain.

Bob Huff has recently accepted the position of manager, information technology. Bob has more than 5 years of experience in computing and network systems management. Huff will oversee the Des-Case computer network system and assumes responsibility for the implementation of advanced information technologies to assist in meeting the company's managed growth goals.

Brian Swain joins the company as product development engineer. A graduate of Tennessee Technological University in Cookeville, Tenn., Swain holds a bachelor's degree in mechanical engineering. His experience includes development of a new preventive maintenance system, as well as pre-production supplier testing for domestic and international air conditioning models. Prior to joining Des-Case, Swain was a product engineer with Whirlpool Corporation, Lavergne, Tenn.

As part of Swain's duties with Des-Case, he will oversee the design of fluid handling products from conceptual stages to production release. He will also assist in production planning and improvements.

"I am pleased to welcome these skilled individuals as new members of our expanding team," said Brian Gleason, president of Des-Case Corporation. "This is an exciting time to be here and a sign of the continuing growth of Des-Case."

Des-Case Corporation is a global manufacturer of contamination control products with the leading position in the breather market. Headquartered in White House, Tenn., the privately held company markets the Des-Case®, Hydroguard™, VentGuard™, and FlowGuard™ brands through an expansive distribution network. The company's products feature designs unparalleled in the marketplace and are used wherever lubricant life and performance are essential to daily operations.
